Resume Summary		Table of Contents	
Education		Beyond The Grid	01-03
The City College of New York Master of Landscape Architecture (MLA) (2024-2027)		Tracing The Roots Of Flushing	04
Ahsanullah University of Science and Tecnology Bachelor of Architecture (B. Arch.) (2015-2021)		Between the Neighborhoods	05-06
Work Experience		Redesign of Ashrafi Masjid	07
City College of New York- New York - College Assistant (2025-Present)		Design of a Community Mosque	08
'Attrito M7 Productions' - Dhaka, Bangladesh - Junior Level Architect (2022-2023)		Game Ready Assets	09
- Key responsibilities: modeling and texturing of video game environments & assets - Video games contributed to: Mayhem, Pink Slip Midnight		Sketches	10
'Architects' - Dhaka, Bangladesh - Junior Assistant Architect (2021-2022)		Interior Design of an Apartment	11-12
- Key responsibilities: architectural design, interior design, landscape design, working drawing, furniture design, 3D visualization, project supervision - Projects contributed to: Dadanpur Munshipara Zame Mosque, BBS Interior, Site Office of Indigo Marble, Landscape Design of Manikgang Graveyard		Design of Ahsania Mission Children City	13-14
Skills		AutoCAD Technical Drawing	15-16
Design and Rendering	AutoCAD, Lumion, V-Ray	ArcGIS Mapping and Spatial Analysis	17-18
3D Design and Sculpting	Rhino, SketchUp, Maya, ZBrush		
Visual programming	Grasshopper		
Graphics and Editing	Photoshop, InDesign, Illustrator, Substance Painter		
Geospatial Platform	ArcGIS Pro		
Microsoft Office	Word, Excel, PowerPoint, Teams, Outlook		
Google Workspace	Docs, Sheets, Slides		
Photogrammetry Software	Substance Alchemist		

Beyond The Grid

Yadiel Rivera-Diaz & Juan Guzman-Palacios, MLA, Studio II -Spring 2025

It was a concept project where we learned how to develop a manifesto and a framework for a project. I worked with a partner on this. Our main idea was “rewilding urban spaces.” We analyzed Northern Manhattan and created some vignettes based on our idea.

Beyond The Grid

Sectional Perspective (Existing Condition)

Sectional Perspective (Proposed Design)

Beyond The Grid

This is the proposed design from 5th Avenue to Marcus Garvey Park, and to implement this design, we used the Miyawaki forest method and Desvigne's grid planting method for planting.

Tracing The Roots Of Flushing

Zihao Zhang, MLA, Studio III -Fall 2025

This project maps the migration history of Flushing, Queens, showing its transformation from a Dutch settlement to a diverse, multicultural community.

The colors represent time periods, and the lines trace immigrant origins. The collage below visually captures this transition through time, showing how the built environment and cultural identity of Flushing have evolved over centuries.

This map was created as part of a StoryMap project. Scan the QR code or visit the website to explore the interactive version.

Between the Neighborhoods

Michael King, MLA Foundations Studio -Fall 2024

In this studio project, I worked with a partner to redesign a site in Manhattan. We picked the site by looking for a location between where both of us live. We chose the pedestrian alley on E. 27th Street, between Mt. Carmel Place and 1st Avenue. One side of the street connects to Bellevue Hospital, and the other side leads to Bellevue South Park. This alley is often used by pedestrians and bikers, but there is no seating available. Our idea was to improve the space by adding different types of seating, increasing the size of planting areas, and making it a more welcoming place where people can stop and gather. We kept the large trees already there and added plants in the under-story and ground layer. We designed various seating, including benches, ledges, and movable tables with chairs. We also included space for vendors to serve people from the hospital and the nearby neighborhood.

Section C-C1

Redesign of Ashrafi Masjid - Karachi, Pakistan

Freelance Project

Project Information

The project involved a redesign based on the client’s desire for the mosque to resemble The Blue Mosque in Turkey. Additionally, the client specified the inclusion of residential facilities for the imam and muazzin, along with their families. The entrance to the residential area needed to be distinct. Other essential elements included designated spaces for ablution, janajah gah, and public toilets.

Design of a Community Mosque - Bangladesh

Architects

Project Information

The client requested a community mosque with maximum prayer space and housing for the Imam and Muazzin, with the main challenge being the concrete screen design on the first floor.

Ground Floor Plan

3D Visualization

3D Visualization

Project Information

The project began with a simple low-poly model in SketchUp, which was refined in ZBrush into a detailed high-poly version. Textures and materials were created from scratch in Substance 3D Painter to give the model a unique look. The high-poly details were then baked onto the low-poly version in Maya, balancing performance and realism. The main challenge was minimizing textures, solved by using a custom trim sheet of 7-10 textures designed specifically for the building.

Interior Design of an Apartment - Sylhet, Bangladesh

Freelance Project

FRONT ELEVATION OF C7
SCALE: AS SHOWN

Designed the interior layout and custom furniture for a residential apartment, focusing on making the space practical and visually balanced.

SIDE ELEVATION OF C7

Interior Design of an Apartment - Dhaka, Bangladesh

Freelance Project

Project Information

This interior project was a small family apartment. I was tasked with creating a straightforward and minimalist interior. The client specifically requested that the design not be overwhelmed with materials or colors. The main challenge was blending the new design with the existing furniture. Given the limited space of the apartment, I opted for a brown color palette to enhance the perception of spaciousness in the room.

Design of Ahsania Mission Children City

B. Arch. - Fourth Year, First Semester (Spring 2018)

Project Information

This project aims to provide support and care for destitute and orphaned children, offering them a safe haven and opportunities for a better future. It focuses on addressing their needs, including shelter, education, and emotional well-being, fostering a nurturing environment for these vulnerable children to thrive.

North Elevation

West Elevation

This course focused on the technical side of drawing. I learned how to create grading plans, calculate cut and fill, make material and planting plans, and draw construction details that are needed to build a project.

ArcGIS Mapping and Spatial Analysis

Michael Tantala, Urban Ecology -Spring-2025

In this project, I looked at the road network of Dhaka and how it connects to schools and hospitals. I also studied the new MRT (Metro Rail) line and how it helps improve access to these public services. Using GIS, I mapped where schools and hospitals are located and how close they are to roads and MRT stations.

ArcGIS Mapping and Spatial Analysis

Michael Tantala, Urban Ecology -Spring-2025

In this project, I analyzed crime locations in ZIP code 11377, Queens, NYC. I looked at how close schools are to those crime spots. I also studied the topography and water flow (hydrology) of the area to better understand the surroundings.
